

Attendees' Feedback on the ETD's 2-day P91/ P92 online Course held in July 2021

Thank you for the amazing training provided. The details were insightful and you provided good explanation to queries arising. All speakers are specialists / metallurgists, shared the best practices and steps necessary to prevent pitfalls.

Along this course, few ideas reinforced to me are tempering temperature range with and portable hardness test. I am myself an engineer in profession, with such training, it boosts my understanding and I believe I can have better strategy in handling this material in future. Again, thank you very much Dr David Allen, Dr D Robertson and Dr Ahmed Shibli.

Appreciate your effort.

=====

Undoubtedly, ETD as well as the presenters of the seminar, met the requirements of the high standard training course on Grade 91 & 92 steels. A wide variety of topics were presented in detail, offering information on both the use and safe inspection of the materials.
Again, I have to emphasize how well the topics were explained and presented by the presenters and the outstanding level of the seminar.
